

January 13, 2012 – For Immediate Release

Space Logix announces the deployment of Microsoft's SharePoint Server 2010 for their clients using the Space Logix facility in Greensboro, NC. Space Logix will provide through the internal SharePoint Server a platform for information access related to technology documentation, software drivers for PC's & Mac's along with information on the facility, announcements pertinent to the community, how to video's and additional information that will make using the Space Logix facility more productive and easier for their clients.

Space Logix has deployed the SharePoint service via their participation in the Microsoft Online 365 cloud based service which was recently released from Microsoft Corporation. Users will be able to share and collaborate on documents, develop electronic forms, improve efficiency and access the server from any platform from the Internet.

Space Logix will continue to develop advanced technology solutions for their clients to improve operations for small businesses and entrepreneurs in the community. Space Logix currently offers VoIP services from **Ringcentral**, High Definition Video Conferencing from **LifeSize Communications**, and Secured wireless from **Sonicwall** and storage solutions from **Seagate Technologies** for their clients and external customers.
